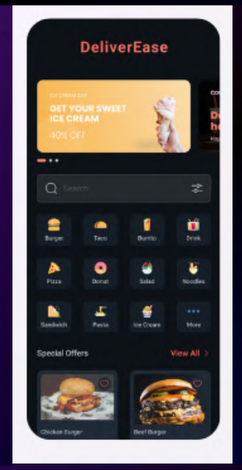
DeliverEase

Vision

To streamline the food delivery experience by providing users with a centralized platform for comparing prices, delivery times, and promotions across multiple services, enabling informed and cost-effective decisions with ease and convenience.

USER PERSONAS

Student



FEATURES

Fuzzy Search for Menu Items

Allows users to enter approximate names or keywords for menu items, bringing up relevant options from partner restaurants.

Benefit: Enhances user experience by simplifying the search process and ensuring users can find their desired items quickly, even without specific names.

DeliverEase

TARGET GROUPS

- **Busy Professionals:** Individuals with demanding work schedules who rely on food delivery for convenience and often seek fast, reliable service options to fit their time constraints.
- **College Students:** Budget-conscious students who regularly order food and prefer affordable delivery options with easy access to discounts and promotions.
- **Families:** Parents and caregivers, including single parents, who prioritize convenience and cost-effectiveness to manage meal times efficiently without high delivery fees or long waits.
- **Food Enthusiasts:** Users passionate about trying new restaurants and dishes who value the ability to explore multiple delivery options, compare prices, and find unique deals across platforms.
- **Frequent Travelers:** Individuals who move between cities or frequently visit new areas and rely on food delivery for meals, looking for a simplified way to discover reliable, local options with minimal research.

BIG PICTURE

Users open DeliverEase and log in using their accounts for various food delivery services (Grubhub, DoorDash, UberEATS). They enter the name of a restaurant or menu item, and the app retrieves relevant items using fuzzy logic, displaying comparable options across platforms, including wait times and delivery costs.

Users can add desired items to a cart within DeliverEase, then transfer their finalized order to the chosen delivery service's app to complete payment and checkout. They can also choose between the free version with ads or the ad-free premium version.

DeliverEase

EPIC

DeliverEase's epic is built around simplifying the food delivery comparison process for users, ensuring they can quickly find the best options for price, speed, and convenience. The user stories revolve around essential actions users can take to efficiently order meals without needing to navigate multiple apps.

USER STORIES

As a user, I want to compare delivery times and prices across multiple services for a specific restaurant so that I can choose the fastest or most affordable option.

As a user, I want to easily find items even if I don't enter the exact name so that I can browse options without needing precise menu information.

As a user, I want to link my existing delivery service accounts so that I can access any discounts or preferential pricing I'm eligible for.

As a user, I want to securely transfer my cart to the chosen delivery service for checkout so that I can complete my order seamlessly without re-entering information.

Michael Adams

ge: 51
ender: Male
ccupation: Single Father
ocation: Denver, Colorado

About Michael

Michael is a single father with two young kids. Between managing work and home responsibilities, he often relies on food delivery to keep up with his family's needs. He wants affordable, timely options that he can quickly access.

Occupation Description

Customer support manager for a local business, handling client concerns and issues daily. Balances his job with caring for his children and managing household tasks.

Needs

- Looking for budget-friendly delivery options and an app that helps him avoid high fees while also providing quick, accurate wait times to avoid making his kids wait for meals.

Pain Points

- Finds it frustrating to pay high delivery fees and experience unpredictable wait times, which can be stressful when feeding young children.
- He wants a straightforward app that consolidates options to save him time and money.

DeliverEase

FEATURES

Integrated Delivery Service Comparison

Displays a consolidated view of delivery times, prices, and promotions across multiple services such as Grubhub, DoorDash, and UberEATS.

Benefit: Saves users time by presenting all options in one place, allowing them to make informed choices based on their current needs.

Fuzzy Search for Menu Items

Allows users to enter approximate names or keywords for menu items, bringing up relevant options from partner restaurants.

Benefit: Enhances user experience by simplifying the search process and ensuring users can find their desired items quickly, even without specific names.

DeliverEase

FEATURES

Secure Cart Transfer and Checkout

After selecting items within DeliverEase, users can transfer their cart directly to the chosen delivery service app, where their order is ready for checkout.

Benefit: Reduces ordering friction and eliminates the need to re-enter items, making the checkout process faster and more efficient.

Personalized User Account Integration

Users link their existing accounts for each delivery app, allowing DeliverEase to apply any personal discounts, promotions, or loyalty benefits automatically.

Benefit: Enhances cost savings by ensuring that users access all benefits through their connected accounts without extra steps.

James Taylor

Age: 33

Gender: Male

Occupation: Software Developer

Location: San Francisco, California

About James

James is a busy software developer at a tech startup, often working late nights and weekends. He frequently orders food during work hours or for quick meals when he's too busy to cook at home.

Occupation Description

Full-time software developer, skilled in coding and troubleshooting, working long hours with limited time to prepare meals; regularly orders food as a convenient solution.

Needs

- Wants quick access to reliable, fast delivery options and the flexibility to choose based on wait times when he's under time constraints.
- He's also interested in finding occasional discounts to save money.

Pain Points

- Frustrated with variable wait times that disrupt his workflow, especially when food arrives late.
- He dislikes spending time comparing apps and wants a more seamless experience.

Sarah Soler

Age: 19

Gender: Female

Occupation: Student

Location: Austin

About Sarah

Sarah is a sophomore at the University of Texas, balancing a busy schedule with classes, part-time work, and a social life. She frequently orders food for convenience and enjoys finding the best deals, as she's on a tight student budget.

Occupation Description

Full-time student with limited time for cooking; often juggles multiple responsibilities and relies on food delivery services for quick, affordable meals.

Needs

- Find the most affordable food delivery options with any available student discounts or offers.
- She wants a fast and easy way to compare options without switching between apps.

Pain Points

- Frustrated with high delivery fees and inconsistent wait times, especially when she's in a hurry.
- She also dislikes that finding discounts often requires toggling between several apps.

STORY BOARD

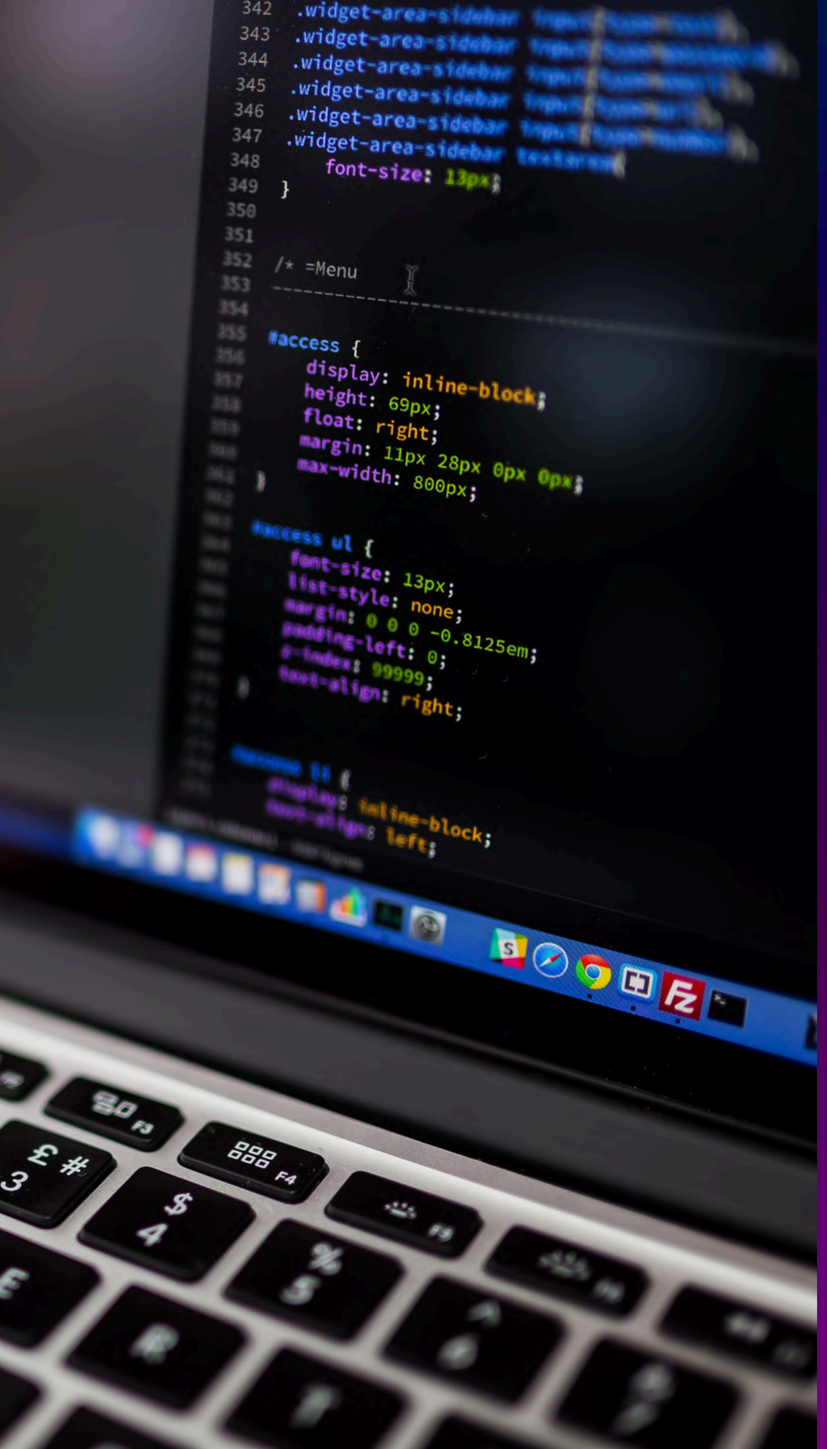
Michael has returned home from work, he and his 2 kids are hungry and Michael is too tired to cook dinner

Michael decides to order food using the DeliverEase App

Michael and his kids are craving burgers, so he decided to order burger. He uses DeliverEase to compare prices and wait times from various services

UberEats had the best offer, so Michael decides to use UberEats. DeliverEase transfers the request to UberEats, and Michael confirms the order on UberEats by paying the amount

Michael and his kids receive the order, and they enjoy their dinner



DeliverEase

TECHNICAL ARCHITECTURE AND INFRASTRUCTURE

- **Cloud-Based Backend:** Scalable infrastructure using AWS for high availability.
- **Microservices Architecture:** Modular design for easy updates and maintenance for individual features.
- **Machine Learning Integration:** TensorFlow for personalized recommendations and demand forecasting.
- **Design focuses on minimizing data input requirements:** Streamlines user interactions to improve overall app usability and reduce friction.
- **Optimized user interface for clarity and ease of use on small screens:** Ensures that the app is intuitive and accessible, particularly on mobile devices.

DeliverEase

GO-TO-MARKET STRATEGY

- **Pre-Launch Buzz:** Influencer partnerships and social media teasers to build anticipation.
- **City-by-City Rollout:** Targeted launch in key metropolitan areas with high restaurant density, and large population of target groups.
- **Promotional Offers:** Aggressive discounts and free delivery for early adopters to drive app installs.
- **Continuous Improvement:** Regular updates based on user feedback and data-driven insights.
